

HATTERAS 60GT

The new Hatteras 60GT is the culmination 50 years of leadership in convertible design and propulsion development, combined with the latest technological advances in materials and methods utilized in fiberglass construction.

This amazing addition to the Hatteras fleet takes its exterior design cues from the current 60 Convertible, but a newly redesigned cockpit and a touch of panache added to the overall design give this 60 a unique style of her own. The interior accommodations found in the 60GT are not only more spacious, but are designed with a level of sophistication not often found in a convertible. Larger window framing allows for better views, and beautifully combined wall coverings and exotic woods create a more open layout while continuing to provide a warm and luxurious environment.

But what is most noticeable about the 60GT is its performance. With its innovative lightweight build combined with an aggressively efficient propulsion design, the new Hatteras 60GT is designed to perform at an elevated level, providing increased efficiency whether cruising or tournament fishing. Combine its performance and style with pricing that makes it competitive with other convertibles in the high-50's range, and you'll see why this Hatteras will be the boat everyone will be chasing when it debuts this fall.

Length overall.....	59'10"	Fuel capacity.....	1,500 gal.
Beam.....	19'0"	Water capacity.....	200 gal.
Draft.....	4'9"	Power.....	twin diesels
