

How to Find the Serial Number on Your Mercury Outboard

The serial number is your key to obtaining accurate parts information and availability for your Mercury Outboard.

You can find the engine serial number on the starboard side of the engine on what's called the "transom bracket". The number will start with a 0 or 1, then a letter (eg. A, C, D, T) then 6 numbers.

An example is 0G465723.

On the transom bracket, you will see a small plate that's been riveted on to the bracket. It should contain the serial number, and on later models it will also include the model year.

Since Mercury uses serial groups more often than model years, it is very important to quote your serial number when looking for parts.
